

Case Study

Project: Chester Lane Library, St Helens
Main Contractor: Yearsley Ltd
Completed: October 2008

The project requirement was to construct a new library extension, which incorporated two folding partitions providing additional meeting rooms and child care facilities.

Due to the building having under-floor heating, but still requiring a hinged product, Multispace Systems developed a pressure pad panel locking mechanism that removed the need for floor sockets, whilst still firmly securing the partition.

Specification:

2 sets of Type M80 folding partitions comprising 9 no panels

42 dB sound rating
Top supported with no floor sockets
Oak Melamine
